

Preface

SECTION I. FUNDAMENTALS OF MATERIALS SCIENCE

Chapter 1. Introduction

The subject of materials science

Overview of history of materials science

Problems and achievements of materials science

Chapter 2. Structure of materials

Atom

Chemical bond

Molecule

Phase state of substance

Gas and liquid

Solid body

Defects in crystals

Modelling of material structure

Chapter 3. Basic properties of materials

Mechanical properties

Corrosion resistance of material

Temperature characteristics

Electric and magnetic properties

Processing properties

Non-destructive test methods

Chapter 4. Engineering materials

Classification

Basics of materials standardisation

Materials databases

Materials science of the XXI century - nanomaterials and nanotechnologies

SECTION II. BASICS OF METAL SCIENCE

Chapter 5. General data on metals

Properties and classification

Atomic crystalline structure

Melt crystallization

Polymorphic transformations

Metal corrosion

Chapter 6. The theory of alloys

Phases of metal alloys

Alloys with complete miscibility of components

Alloys with partial miscibility of components

Alloys forming chemical compounds

Interrelation between structure and properties of alloys

Three-component alloys

Chapter 7. Strength of metals and alloys

Stress and strain

Strain hardening and fracture

Mechanical testing

Structural strength

Means of structural strength enhancement

Chapter 8. Recrystallization in metals and alloys

Recovery and recrystallization

Recrystallized metal structure

Cold and hot deformation

Chapter 9. Iron and its alloys

Iron-carbon alloys

State diagram of iron-carbon system
Effect of carbon and impurities on the properties of steel
Steel alloying
Chapter 10. Heat treatment of steel
Types of heat treatment
Transformation of pearlite into austenite
Transformations of supercooled austenite
Pearlitic transformation
Martensitic transformation
Bainitic transformation
Tempering and aging of steel
Effect of heat treatment on mechanical characteristics of steel
Chapter 11. Technology of heat treatment of steel
Annealing and normalizing
Hardening
Surface hardening
Tempering and artificial aging
Thermomechanical and mechanochemical treatment
Chapter 12. Thermochemical treatment of steel
Mechanism of surface layers modification
Carburizing
Nitriding, nitrocarburizing and cyanide carburizing
Boronizing, siliconizing and diffusion metallization
High-energy methods of chemical modification
SECTION III. METALLS AND ALLOYS
Chapter 13. Structural steels and alloys
Classification
Carbon structural steel
Building low-alloy steels
Carburizing alloy steels
Heat-hardenable alloy steels
High-strength steel
Spring steels
Wear-resistant structural steels
Corrosion-resistant steels and alloys
Heat resistant steel and high temperature steels and alloys
Cast steels
Chapter 14. Cast irons
Structure of cast iron
Grey and white cast iron
High strength cast iron
Wrought iron
Alloyed cast iron
Chapter 15. Tool steels
Steels for cutting tools
Steels for measuring tools
Steels for cold deformation tools
Steels for stamps of hot deformation
Chapter 16. Powder metallurgy
Metal powders production
Powder forming
Sintering
Antifriction materials
Frictional materials

Porous powder materials
Electrotechnical materials
Structural material
Refractory metals and alloys
Hard alloys
Chapter 17. Aluminum and aluminum-based alloys
Properties of aluminum and classification of its alloys
Deformable alloys
Casting alloys
Bearing alloys
Chapter 18. Copper and copper-based alloys
Properties of copper and classification of copper-based alloys
Brasses
Bronzes
Chapter 19. Special-property alloys based on nonferrous metals
Titanium and titanium-based alloys
Magnesium and magnesium-based alloys
Tin-, lead- and zinc-based antifriction alloys
Beryllium and beryllium-based alloys
Chapter 20. Alloys with special physical properties
Conducting materials
Superconductors
Semiconductors
Magnet materials
Shape memory alloys
High-resistance alloys
Alloys with specified linear expansion coefficient
Steels and alloys with special elastic properties
Alloys for cryogenic technology
SECTION IV. NONMETALLIC MATERIALS
Chapter 21. Plastics
Classification of polymers
Main properties of polymers
Nomenclature of construction plastics
Technology of plastic processing
Polymer films
Chapter 22. Raw rubbers and rubbers
Natural and synthetic raw rubbers
Vulcanization of raw rubbers
Rubbers classification
Properties of rubbers
Chapter 23. Materials based on wood
Structure and properties of wood
Modification of whole timber
Classification of wood-based materials
Paper and cardboard
Chapter 24. Minerals and mineral-based materials
Hard and superhard materials
Mineral silicate-based materials
Glass and glassceramics
Technical ceramics
Graphite and graphite-based materials
Chapter 25. Technical fluids and gases
Classification of technical fluids

General characteristic of lubricants

Lubricating oils

Grease lubricants

Actuating and process media

Special technical fluids and gases

SECTION V. COMPOSITE MATERIALS

Chapter 26. Structure of composites

Basic terms and classification

Criteria for component combination

Structure formation

Perspectives on the use of composites

Chapter 27. Composite plastics

Components interaction

Filled plastics

Laminated and reinforced plastics

Polymer mixtures

Chapter 28. Metal matrix composites

Disperse reinforced materials

Eutectic composites

Fibrous materials

Chapter 29. Ceramic matrix composites

Classification

The choice of components

Technology

Properties and application

Chapter 30. Materials for coatings

Types of coatings and methods of their application

Paint and lacquer materials

Powder polymer coatings

Coatings of metals and alloys

Inorganic non-metal coatings

SECTION VI. THE BASIS OF MATERIALS SELECTION

Chapter 31. Materials selection during preproduction

Product development

Technological preproduction

Article cost and operating properties

Chapter 32. Economic effectiveness of materials

Prices for materials

Economic criteria for materials comparison

Materials effectiveness determination methodology

Conclusion

List of symbols and abbreviations

Recommended literature
